Michael Platt Care Guide

Caring for Your Engagement Ring

Please do pop in to see us with your ring at least once a year for your annual check up and complimentary ultrasonic clean, we'd love to see you!

1. We recommend taking your engagement ring off at night, before a shower/bath/washing up and PLEASE don't wear to the gym!

2. If your stones are set in claws, be mindful of knocking them or the stones becoming loose. You can check this by holding the ring by the base, holding it up to your ear and lightly tapping on the ring. If you can hear a rattle, it's time to come and see us!

3. Please do not immerse the ring in water if it has the following stones set in it: Emerald, Pearl, Opal, Turquoise, Lapis Lazuli, Malachite

4. To keep diamonds clean (and sapphires), soak in lukewarm soapy water in a small bowl for 20 mins. Use a soft toothbrush to remove any build up. Use a clean lint-free cloth to dry and polish diamonds and settings.

5. Please do not use any chemicals on your ring!

6. It is inadvisable to wear gold (white, yellow and rose) against platinum. Platinum will wear away the softer gold.

Any questions — please just give us a call — 020 - 8947 - 4772
